

Orbit Management Framework (OMF)

Tutorial

Thierry Rakotoarivelo
Max Ott

Australian Government
**Department of Communications,
Information Technology and the Arts**
Australian Research Council

NICTA Members

Department of State and
Regional Development

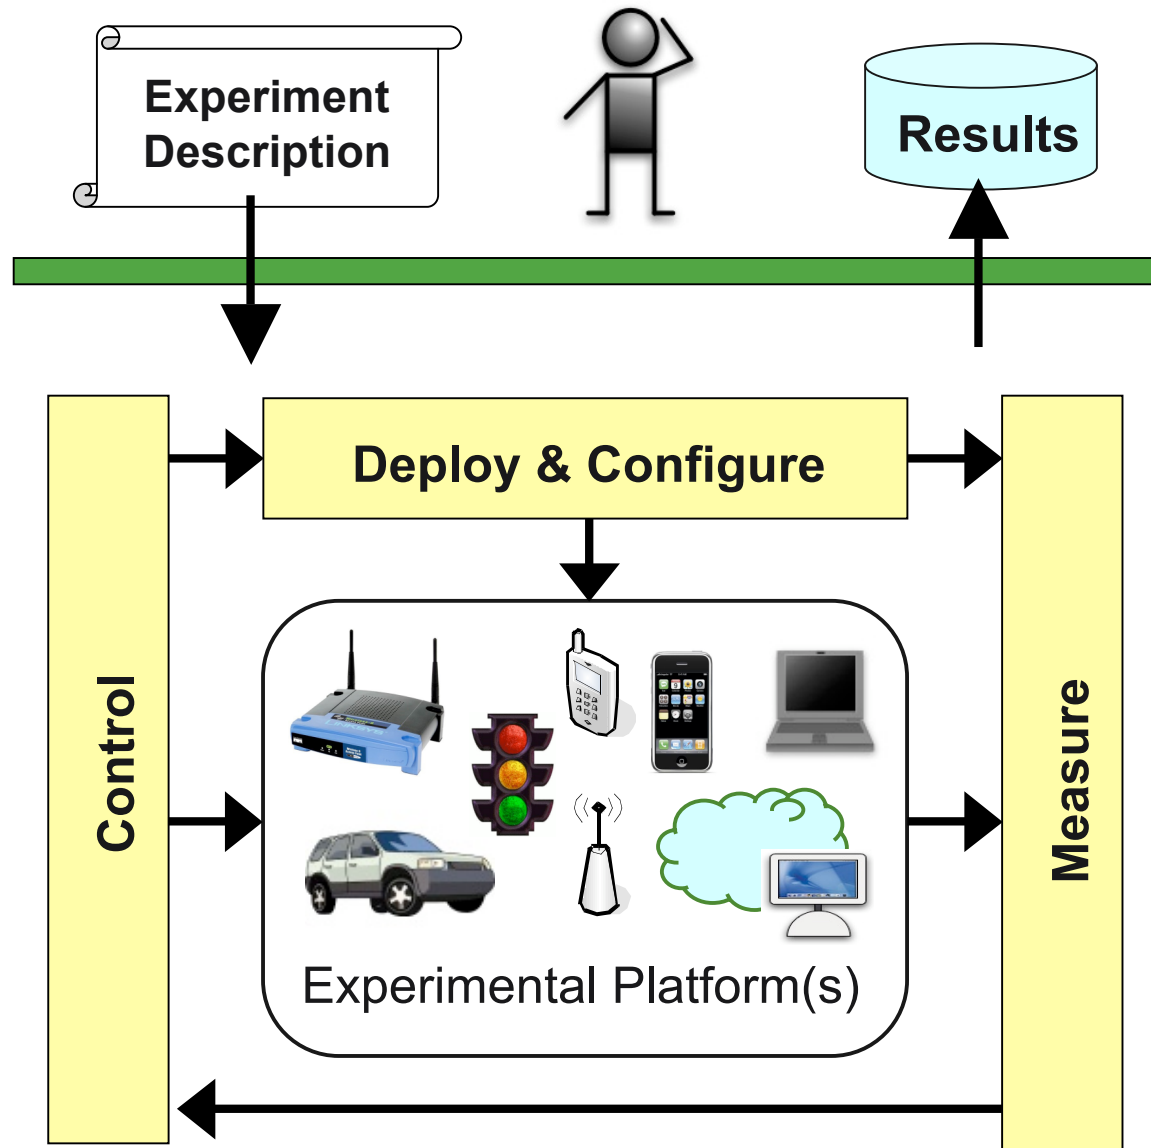

NICTA Partners

- **Introduce** OMF, and **demonstrate** how to use it
- **Create** interests, and **build** future collaboration
- Outline:
 1. Overview
 2. Getting Started: a simple example
 3. The Next Steps...
 4. Glimpse of Future Features
 5. Conclusion

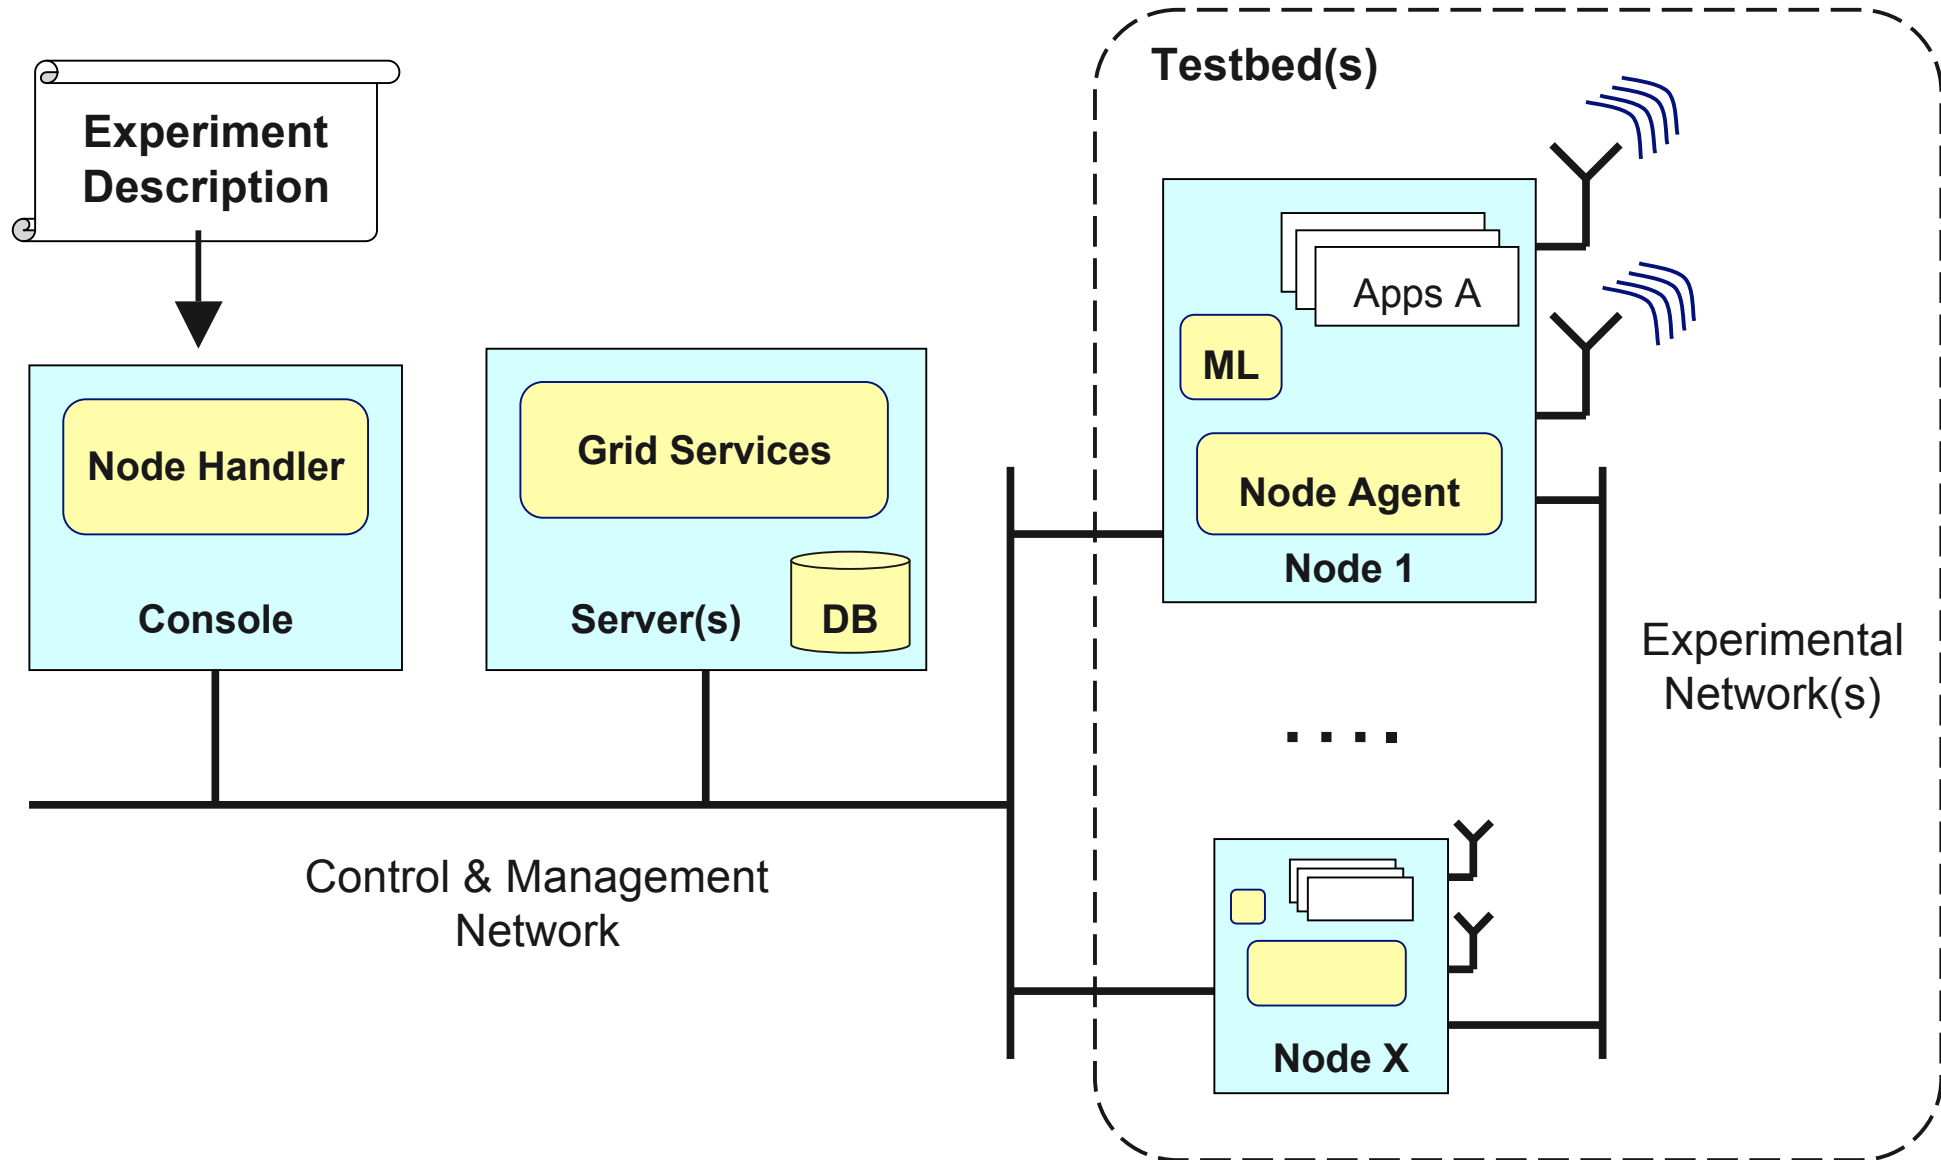

1. Overview
2. Getting Started: a simple example
3. The Next Steps... a *'less simple'* example
4. Glimpse of Future Features
5. Conclusion

- Why do we need a framework to **use** and **manage** testbeds?
 - User
 - support “*experiment cycles*” + scientific rigour
 - validation, accuracy & reproducibility
 - Operator
 - ease management tasks
 - optimize resource utilization (intra / inter)
- Other existing frameworks: PlanetLab tools, Emulab
- **OMF** - support for *experiment cycles*
 - ease management tasks

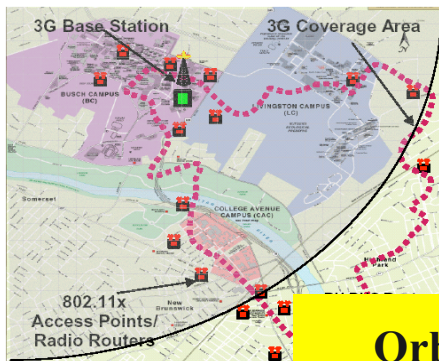

OMF - User View

OMF- Operator View

- **Where ?**

**Orbit, Winlab
Rutgers University**

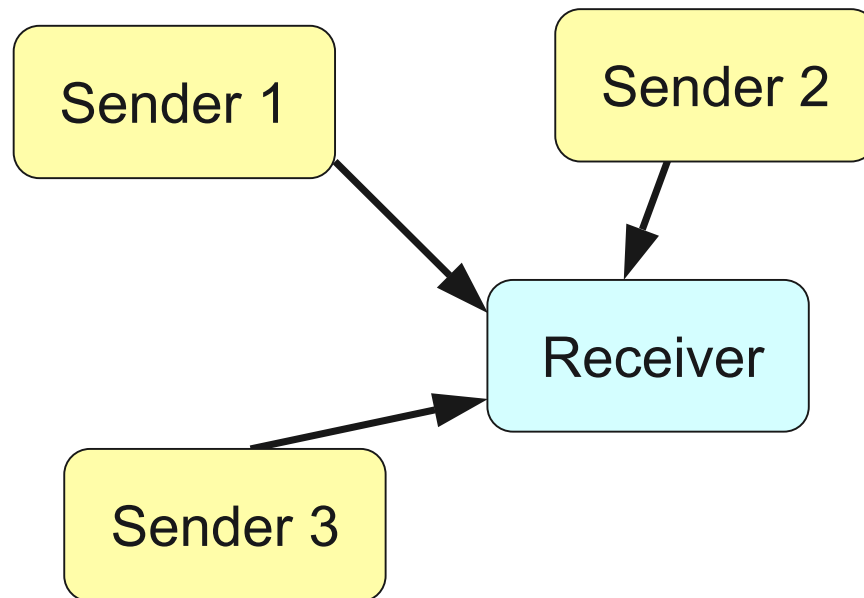

NICTA Sydney

- **How-To deploy OMF?**

- Open source code & Debian-style packages
- Installation Guide
- Support (omf-deploy@lists.nicta.com.au)

1. Overview
- 2. Getting Started: a simple example**
3. The Next Steps... a *'less simple'* example
4. Glimpse of Future Features
5. Conclusion

- Simple Experiment
 - Scenario
 - Experiment script & description language

- Ad-Hoc
- 802.11a
- CBR
- Exp. Script...

Getting Started: a simple example

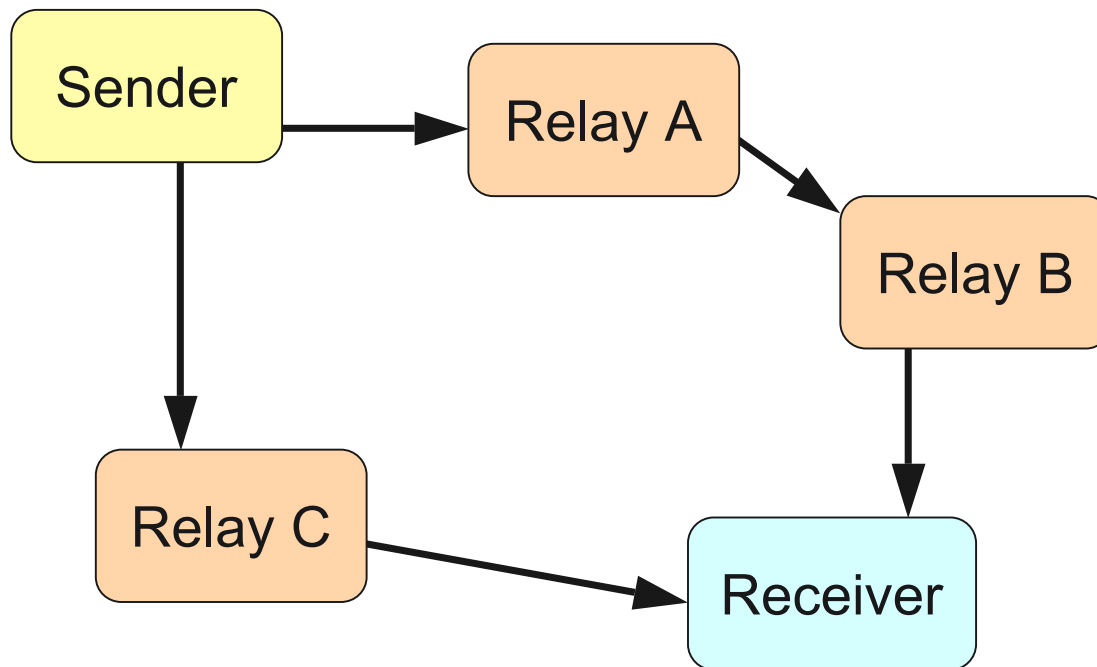

- Executing the experiment
 - Same experiment description on 2 different testbeds
 - 1st run at NICTA... - *demo* -
 - 2nd run at Orbit Winlab... - *demo* -
- The results - *demo* -
 - User-defined measurement points & filters
 - Unified collection scheme
 - SQL-based database
 - User processing scripts

1. Overview
2. Getting Started: a simple example
- 3. The Next Steps... a *'less simple'* example**
4. Glimpse of Future Features
5. Conclusion

The Next Steps... a 'less simple' example

- The Experiment

- Scenario
- Experiment script & description language

- Ad-Hoc
- OLSR daemon
- Multi-paths
- Mac filtering
- 802.11g
- CBR
- Exp. Script...

The Next Steps... a 'less simple' example

- Executing the experiment at NICTA...
 - *demo* -
 - Processing the results
 - *demo* -
 - What's next ?
 - Apps installation & node Imaging / Saving
 - Wrapper around other popular apps (e.g. iperf)
 - Your own scheme / algorithm
- Up for you to try... (<http://www.orbit-lab.org/>)

1. Overview
2. Getting Started: a simple example
3. The Next Steps... a *'less simple'* example
- 4. Glimpse of Future Features**
5. Conclusion

- **Federation:**
 - Experimentation **on / across** multiple testbeds
- A unique *description* → many instances
 - How to describe an experiment & required resources ?
 - How to discover/schedule resources & map descriptions ?
 - How to federate multiple organizations ?
- An experiment across testbeds → enhanced capabilities
 - Further description, discovery, scheduling, mapping issues
 - How to coordinate resource usage across locations ?
- PlanetLab's "Hello World" with OMF - **demo** -

- Resource Sharing: System & Communication abstractions
→ at which **level** and **layer** to **virtualize**?
- OS / Hardware virtualization
- Network / Link Layer virtualization
→ e.g. how to share wireless medium?
- Current trials:
 - Xen virtual machines on NICTA's testbed
 - Space and Frequency sharing
- Issues: **adapt** to user needs & to new technologies

- Other features under development
 - Additional access methods (e.g. web interface)
 - Generic processing & visualization tools
 - Default context measurements (e.g. system stats)
 - “Disconnected” mode (e.g. mobile testbeds)
 - “Batch” mode
 - ...

1. Overview
2. Getting Started: a simple example
3. The Next Steps... a *'less simple'* example
4. Glimpse of Future Features
- 5. Conclusion**

- Need for a framework to use and manage testbeds
 - Support full experiment cycle & increase scientific rigour
 - Ease management & Optimize resource utilization
 - **OMF**: deployed, used, and being actively improved
- Tutorial on using OMF
 - High-level experiment description
 - Controlled experiment execution
 - Unified measurement collection
- Future OMF... **v2**:
 - Federation of multiple testbeds
 - Resource Virtualization
 - Enhanced user experience
 - New / Other network technologies

Thank you

Any questions?
